*start of a new*  
**TRADITION**

We founded Bonefish Boatworks to fill a void in the custom boat building industry. Our company is dedicated to the manufacture of exceptional composite fishing boats. We started with just two models and a single brand, but have grown to seventeen different models across multiple brands. This affords our clients the unprecedented ability to design and personalize a boat that best fits their needs, style and budget. Regardless of the number of different models we've brought to market, our commitment to quality, performance and craftsmanship remains constant. We thank you for considering us, and hope you choose to join our family of boat owners.

*Ron & Celisa Cook*

Ron and Celisa Cook

*the advantage of a*  
**CUSTOM BOAT**

For some builders “custom” means you pick a hull color from a pre-determined list. Not so with us. When we say custom, we mean it. You can pick any color in the spectrum for your hull, deck, console and hatches. You also pick the color of your upholstery, stitching and piping. In addition, many of our boats offer multiple console, seating and pipework options. Owners choose from anodized, powder coat and even Line-X coatings for their pipework. The number and placement of live wells is often an option as well, as is the brand and model of trolling motors, shallow water anchors and electronics packages. We also offer every major brand of outboard power on the market. In short, you get exactly what you want the way you want it. It requires some patience during the build process, but you’ll be rewarded with exclusivity and superior resale value over conventional boats.

*the difference in*  
**QUALITY COMPONENTS**

Building high performance fishing boats with consistently superior quality requires continual diligence and attention to a myriad of details. We constantly search for and research the best components possible to use in the construction of our boats. Like the proverbial chain, we seek to eliminate any weak links. That is why we only associate with the very best companies and use proven components from industry leaders. From Type 316 stainless steel to tinned copper wiring, if the component isn't of the highest quality, we won't use it. That's not to say our owners never experience a deficiency, but it does mean that they can rest assured that we did everything we could to try to avoid it and that we'll make it right should it happen.

*the benefit of*  
**SUPERIOR COMPOSITES**

Unlike other recreational boats, Bonefish brand boats are built using high-grade lamination materials that yield a vastly superior composite. It all begins with UV-resistant npg-isophthalic gel coat with superior elongation that resists cracks, blushes and blisters. That means the hull, deck and other parts stay shiny and blemish-free longer. All of our composites are built using a proprietary blend of bi-axial woven fiberglass, Kevlar, carbon fiber and Innegra fabrics that are applied in multiple layers and in opposing directions with overlapping seams. This means the parts are **STRONG**. Very **STRONG**. In addition, the fabric layers sandwich high-density closed cell foam coring that provides rigidity as well as flotation. These composite layers are chemically bonded to one another using a superior blend of epoxy vinyl ester resin that is specifically formulated for maximum corrosion resistance, excellent impact strength and extreme tensile elongation. All of this means that our composite laminates are stronger, stiffer and lighter than the conventional laminates used by the balance of the recreational boat manufacturing industry. Use of high-tech materials certainly comes at an increased cost, but the resulting ride and performance of our boats make it well worth it.

v-pad

## STEPPED BOTTOM

The hallmark of Bonefish brand fishing boats is our exclusive use of v-pad stepped bottom hull designs. A “step” is a transverse notch in the bottom of a boat. With a step, the dynamic pressure beneath the boat is distributed over two or three small patches of hull surface (one step yields two patches while two steps result in three patches). Each of these patches is wider and shorter than the wetted surface of a traditional hull bottom. This means reduced wetted surface with less frictional resistance. As velocity increases a partial vacuum with lower pressure than the surrounding atmosphere is created aft of each step. The lower pressure then draws in ambient air which is distributed along the hull bottom. Since air is more slippery than water, the boat hull has less drag and goes faster for a given amount of thrust. Said differently, a stepped boat traveling at the same rate of speed can do so using less power and with reduced fuel consumption. We've combined the benefits of the stepped bottom design with a v-pad running length-wise along the keel. This v-pad further reduces dynamic drag ensures directional stability and improved handling over other inferior step bottom designs.

*about*  
**BOHEMIAN 17'**

With its unique running surface and notched transom, the Bohemian 17' runs, floats and poles in super shallow water. No other skiff offers the combination of performance and capability delivered by the Bohemian 17. While this boat is great for weekend enthusiasts, it was specifically designed for tournament anglers that have to cover ground quickly and comfortably. Unlike competitors that deliver shallow water capability with flat bottom hulls, the Bohemian's deeper deadrise and stepped bottom combine to deliver a smooth ride that saves both fuel and your body. All of this performance is wrapped in a stylish package that never fails to turn heads. If you don't like attention, then this is definitely not the boat for you.

*about*  
**DIAVOLO 20**

The Diavolo 20 redefines the flats boat with terrific holeshot and fantastic performance in rough water. This sleek boat is quickly becoming a favorite of top backcountry anglers and guides. Legendary for its speed, range and ride, the Diavolo 20 features an advanced livewell system, a center gas tank for superior balance and accessibility as well as a recessed console with a state of the art switch panel and room for flush-mounted electronics. Storage space fore and aft allows gear to be stowed dryly and securely for any situation. The Diavolo is light and strong for better range and speed with mid-range power options up to 200 hp. An optional backrest and a legendary ride make the long early-light runs deep into the backcountry a safe and comfortable experience.

*about*  
**HILL TIDE 22**

If you were lured into boating by the love of fishing, but need the amenities necessary to make the family comfortable and safe on the water, the Hill Tide 22' is an ideal choice. Built for versatility, this boat is designed to excel as both a fresh and saltwater fishing machine. The boat is also designed to easily navigate different waterways with ease. That means you can take it on a weekend picnic, water skiing, camping, exploring and on fishing trips. In its stock configuration, the Hill Tide 22' offers two bait wells, forward rod lockers, ample storage and your choice of outboard power. Options include a t-top, hard top, electronics, shallow water anchor systems and trolling motor. With her wide beam and generous seating, the Hill Tide 22' is the clear choice for family fun.

*about*  
**MALVADO 26**

The Malvado has aggressive styling a complex running surface, and unique features like multiple helm seating options, different consoles, seating for up to 8 people, up to three livewells (front and back wells are standard), an extra-large fish box, lockable rod boxes, coaming bolsters, jack plate, tons of storage and an optional enclosed head. The result is a boat with superior performance, ergonomics and versatility. At over twenty-five feet long, the Malvado is a super stable platform that handles open bays and near shore trips with ease. A hull draft of only 13" gives her access to the skinny stuff, while her sharp entry and flared bow shed water when running in chop. The Malvado 26' features an ample front deck with storage and integrated seating, as well as a large fishable aft deck with jump seats and storage.

*about*

## **CUBERA 28**

The Cubera 28' is the ultimate sport-fishing boat for professional anglers. The Cubera's hull sides are cored making the boat rigid yet lightweight. Outstanding fuel economy and bountiful fishing features maximize enjoyment for offshore excursions. The deck is flat with storage compartments below. The console allows plenty of walking space on either side, and the wide gunwales can accommodate downriggers, outriggers and rod holders. For those who love relaxing cruises, the Cubera 28' also offers a spacious foredeck and helm with plenty of seating for both family and friends. Standard features include baitwell, fish box and superb craftsmanship. Power options include single or twin V-6 outboards or a single V-8 outboard. If you're fanatical about deep-water fishing, you'll love the Cubera 28'.

*about*  
**TORTUGA 30**

The Tortuga 30' delivers big boat performance in a package that can be comfortably towed on a trailer or behind a yacht. The precisely engineered hull geometry obliterates waves while directing errant water away from the boat. This makes the Tortuga one of the driest center console fishing boats available under 34 feet in length. The v-pad stepped bottom of the Tortuga creates a comfortable ride, reduces pitch and roll, and allows the boat to be operated more efficiently than her contemporaries. With over 80 gallons of standard live-wells and a 180 gallon insulated fish box, this center console can play with the big boys at any fishing event.
